Subject: RE: Fire Status

No. We don't agree with 67 ppm. That level is within the range that could possibly result in development effects in the fetuses of pregnant women. We would recommend 0.5 to 1 ppm sustained for 5-10 minutes as a shelter-in-place value. Even in this range, butadiene levels could be odorous enough to cause indirect health effects like headache and nausea. On-site personnel are encouraged to use their judgment if the odors resulting from 0.5 to 1 ppm are too strong for kids, regardless of what the data show.

Can someone look at this request and let us know if the levels proposed are protective? Thanks.

Subject: RE: Fire Status

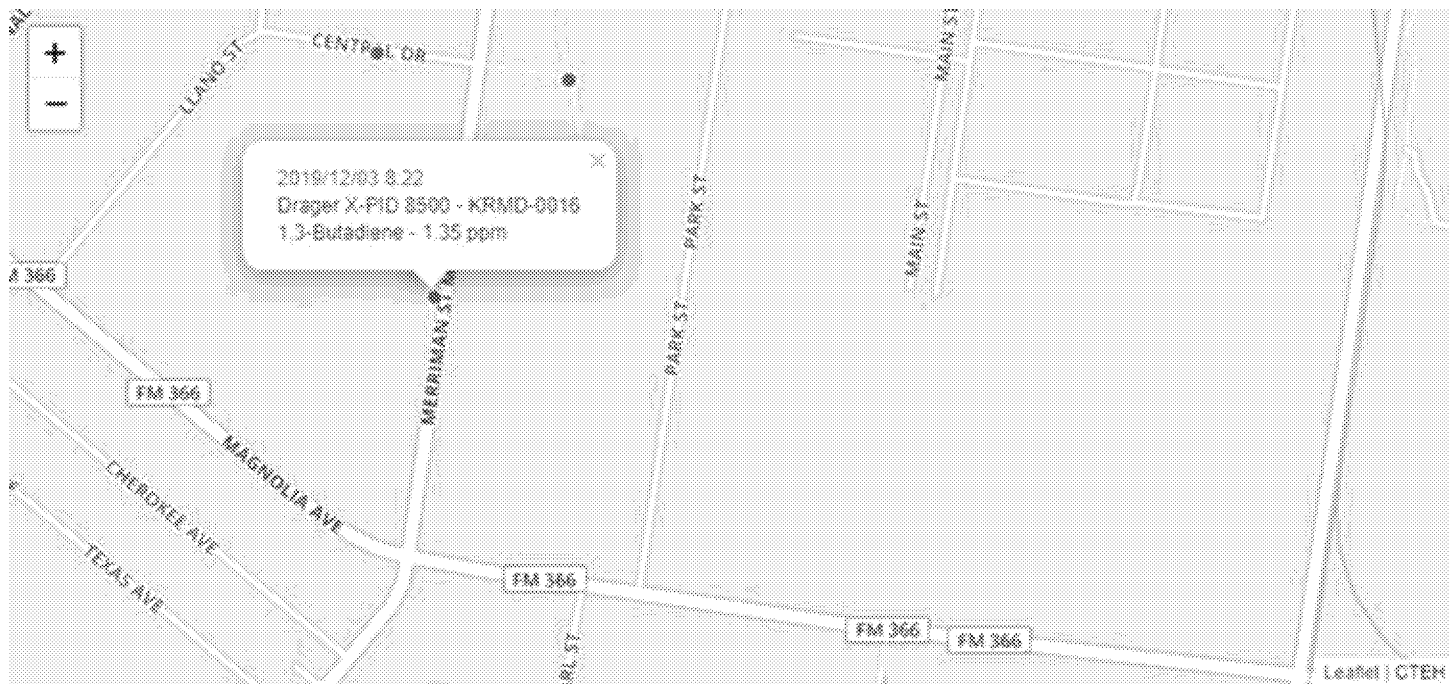

Update:

The strike team went to the area and no more readings above-action level (0.5ppm for 1,3-Butadiene (BD) and 5.0ppm for VOCs) were recorded. They recorded a sustained reading of 1.2ppm of BD at around 8:20am this morning. They recorded a max reading of 1.35ppm BD (seen below) at Port Neches Middle School.

TPC is requesting advice/feedback on the following parameters that CTEH's toxicologist has determined for action-levels for shelter-in-place/potential evacuation of the schools that are nearby (Port Neches Middle School, Port Neches Elementary School, and Port Neches-Groves High School):

At 10ppm BD, CTEH's toxicologist will go to the location of the reading and evaluate. At 60-67ppm BD they will alert school officials to evaluate shelter-in-place/evacuation measures. They determined 60-67ppm BD due to Acute Exposure Guidelines (EPA) of (AEGL1) 670ppm for 10 min – they took 10% of this amount.

Does this sound appropriate? We are in contact with the school officials and are able to contact them ASAP if we get high readings.

Thanks,

Jillian Layton TCEQ Region 10 | Environmental Investigator III

Do we know what time CTEH got the detection and if it was sustained? Did we ever get a link to the CTEH website containing their data like they had with the ITC incident?

Thanks,
Mike

Good morning,

Below is the overnight update from our Beaumont investigator, Jillian Layton.

As Jillian was typing the update, she was informed that CTEH got a Butadiene hit of 1.2ppm at Port Neches Middle School (action-level for strike team is 0.5ppm). The county judge was being alerted as she typed the email. The strike team was sent out to verify readings (they were nearby).

We will keep you updated.

-Ramiro

Subject: RE: Fire Status

No alligators popped up overnight! It was a quiet night with the fire, minus a pump that burned up, but they got one up and running quickly! But when the pump went out overflow at Outfall 201 occurred. It should be getting under control very soon.

We got some Butadiene hits overnight (none in community areas). They have a tank (butadiene) that has been leaking off and on – they are developing a plan to get the leak stopped as we speak. We believe this may be connected to the Butadiene tanks. I'll update when I get an update. They did a drone flyover of this tank and we could see a small leak via the IR camera.

Otherwise, it was a quiet...

As I am typing this CTEH got a Butadiene hit of 1.2ppm at Port Neches Middle School (action-level for strike team is 0.5ppm). The county judge is being alerted as I type this. We have sent the strike team out to verify readings (they were nearby). We'll keep y'all updated!

Thanks,
